

eZMount® Twist

Mounting System for Tablets and Electronic Flight Bags (EFB)

eZMount® Universal Cradle on an eZMount® Twist mounting system

OVERVIEW

Carlisle Interconnect Technologies (CarlisleIT) offers a line of eZMount® tablet mounting solutions to support the ever-changing landscape tablet devices available.

The foundation of the system is the eZMount® Twist, which allows easy, one-handed adjustment of the tablet angle.

This mount increases the longevity and flexibility of the installation to support future tablet devices that change and evolve very rapidly, giving airlines flexibility to upgrade their devices without driving costly change to the aircraft fleets.

THE CONNECTED COCKPIT

The connected cockpit will include generations of tablets for both operations and electronic flight bag purposes. Carlisle Interconnect Technologies (CarlisleIT) has developed a universal mounting system which allows robust support of these devices on the flight deck without constant re-certification with every change of form factor or protective case.

This is a complete suite of products intended to provide a long life installation for multiple generations of touch screen devices.
